IDENTIFIERS *Shelflist Sample

ABSTRACT

A shelflist sampling project was conducted at six academic libraries in Louisiana--Loyola University, Louisiana State University, Nicholls State University, Southeastern Louisiana University, Southern University, and Tulane University--and the University of California at Santa Barbara. The main objective of the data-gathering and analysis using the shelflist sampling methodology was to compare segments of the holdings of the participating libraries. The ultimate objective of the study was to create an information base of collection profiles which could be used to foster cooperative and collaborative collection development. This report begins with a narrative summary of the project covering the project history; the methodology used; the results of the data analysis; the potential utility of the research results; and activities during the project, after the grant period, and in the future. Three appendices constitute the major part of the report: (1) data analysis with selected graphs; (2) copies of the data reports for the participating libraries; and (3) a final accounting for the expenditure of the grant funds. Final Report: CLR Grant 4041

The collection evaluation project funded by CLR Grant 4041 has been completed. The two investigators wish to express their appreciation to the Council on Library Resources for funding this research project. The results of the project make a significant contribution to the field of collection evaluation. The investigators intend to report the findings of the project to the profession at large and to continue with the research.

The investigators also wish to acknowledge the significant amount of support in terms of time granted, support personnel, and supplies given to the project by both the LSU Library and the LSU School of Library and Information Science. The grant funds did not fully cover all of the data input and analysis and appreciation is expressed to both SLIS Dean Kathleen M. Heim and LSU Library Director Sharon A. Hogan for their support for the completion of the project and continuing assistance as more academic libraries in Louisiana have formed a second phase of the project.

This report contains a narrative summarizing the project and three appendices: A) Data analysis with selected graphs; B) a copy of the data reports for each library; C) a final accounting for the expenditure of the grant funds.

I. Project Summary and Analysis.

Data gathering was carried out for seven academic libraries: six in Louisiana and one in California. Four academic libraries in Louisiana in the southeastern portion of the state were included in the original grant proposal. Two other libraries asked to join the project after the grant was received. The University of California Santa Barbara library was asked to participate to extend the project to a national scale. Individual reports have been submitted to all of the libraries which participated in the project.

Participating libraries.

1. Southern University Library, Baton Rouge. State supported land grant institution. Georgia Brown, Director.

2. Louisiana State University, Baton Rouge. State supported land grant/sea grant research university. Sharon Hogan, Director.

3. Loyola University Library, New Orleans. Private Catholic university. Mary Lee Sweat, Director.

4. Tulane University Library, New Orleans. Private research university. Philip Leinbach, Director.

5. Southeastern Louisiana University Library, Hammond. State supported university. Landon Greaves, Director.

6. Nicholls State University Library, Thibodaux, LA. State supported university. Sharon Goad, Director.

7. University of California Santa Barbara. State supported research university. Joseph Boisse, Director.

Project History

In 1984, two subject bibliographers at Louisiana State University, Beth Paskoff, Science Bibliographer, and Anna Perrault, Humanities Bibliographer, conducted a shelflist sampling project. Although both had worked with the LSU Library collection for many years, filling out Conspectus worksheets caused them to want to obtain more detailed data on the collection than the annual shelflist count and spot checking with bibliographies had afforded. The shelflist sampling project resulted in data on the distribution of imprints by decade for the total collection and also individual subject areas. The distribution of foreign language imprints by age and by subject was also obtained. Data was gathered on the amount and distribution of multiple copies. An article on the shelflist sampling methodology, the analysis, and use of the results stemming from this project is forthcoming in the April, 1990 issue of *Library Resources and Technical Services.*

In the spring of 1988, Paskoff and Perrault submitted a grant application to the Council on Library Resources to conduct a shelflist sampling project at four academic libraries in Louisiana. A five-year update for LSU was planned, and the only other ARL library in Louisiana, Tulane University, was included in the plan. The libraries at Southern University and Loyola University were also designated as participants in the original proposal. Southeastern Louisiana University Library joined the project after the grant had been obtained.

Data-gathering for three academic libraries in Louisiana had been completed by March 1989. A presentation using this data was made to the Collection Development Interest Group at the annual Louisiana Library Association conference in March, 1989. Another Louisiana academic library, at Nicholls State University, joined the project as a result of this presentation.

Data gathering and analysis is now complete for all seven libraries in the project.

The main objective of the data-gathering and analysis using the shelflist sampling methodology is to compare segments of the participating library collections. The ultimate objective in gathering and analyzing the data is to provide an information base of collection profiles which will foster cooperative and collaborative collection development.

Methodology

A random sample is taken of five percent of the titles in the library's shelflist. For each card in the sample the year of publication and language of publication are tallied on a worksheet. The top portion of the worksheet is divided into a section for monographs and one for serials. The shelflist is divided into 110 Library of Congress subject breakdowns with a worksheet for each subject section. It takes approximately fifteen to twenty minutes to sample a full shelflist drawer.

The data gathered is input using the software program "Nutshell Plus." The entire collection can be analyzed according to the number of imprints by year in decade blocks; percent and distribution of foreign language imprints by year; or imprint and foreign language distribution for any one of the 110 LC subject sections.

The bottom portion of the worksheet is used to gather data on the number of multiple copies and withdrawn copies in the collection and where they occur. The locations in this section of the worksheet vary according to the library being sampled.

Data Analysis

Overall collection comparisons can be made based on the sampling data. Three summary data tables have been constructed which show overall findings for the major areas studied in the sampling project.

The first of these tables gives the total number of sample observations for each library, thus providing a comparative look at the size of each library collection. This table includes the percentage of the total collection made up by monograph and serial titles. The larger research libraries show a higher percentage of the collection in serial titles than do the smaller academic institutions.

Summary Data Table I

Size of Sample

	Total samples	% monographs	% serials
Loyola	8,216	98.70	1.30
Louisiana State Univ.	43,263	96.30	3.65
Nicholls State U.	8,216	97.78	2.22
Southeastern La. Univ.	8,306	99.3	0.84
Southern Univ.	8,332	96.26	3.74
Tulane Univ.	33,295	96.5	3.49
U. Calif. Santa Barbara	52,526	96.6	3.37

The second table shows the results for each library of the number of titles sampled which have more than one copy, and the percent of the titles in the collection having more than one copy.

Summary Data Table II

Duplicates

	No. of Titles	Percent	No. of Dups.
Tulane	2,148	6.23	4,959
LSU	2,432	5.62	5,810
UCSB	3,071	5.85	9,306
Southern	1,696	20.35	4,434
Loyola	549	6.68	1,475
Southeastern	252	3.03	713
Nicholls	364	4.43	801

The third table shows the distribution throughout the collection of the number of titles sampled in each of the major European language groups for the three ARL libraries participating in the project.

Summary Data Table III

Language Distribution

	LSU	TULANE	UCSB
English	36,551	25,300	35,562
French	2,014	2,085	3,154
Italian	328	620	1,247
Span/Port	1,686	4,000	4,028
German	2,041	1,919	4,133
Slavic	400	268	2,134
Asian	44	20	1,858
Classical	150	216	225
Other	49	72	185

The summary data tables show differences in ratios between collections. The three research university library collections are very close in the ratio of serial to monographs titles. In the duplicate data, the three research libraries have a very close ratio of titles with more than one copy to total number of titles in the collection. It would be interesting to see if this same ratio would hold true if data were gathered on more libraries. If 5-6% were to be taken as a norm, two of the libraries clearly diverge from this norm. One library has a somewhat lower ratio, and one has an extremely high ratio of multiple copies.

In the foreign language totals from the sample by major European language grouping, the power of the methodology to show differences in the makeup of collections is apparent. The strengths in Spanish/Portuguese material in two of the libraries, and the number of German, Slavic and Asian materials in one collection demonstrate why comparison by total volume count is not a satisfactory gauge of a research collection.

Potential Utility of Research Results

Data gathered and analyzed from a shelflist sampling project can be both of immediate and long term utility. It can be used to make enlightened value judgments about the strengths and

weaknesses of a collection for writing collection development policies and filling out Conspectus work sheets, and can form the basis for coordinated and cooperative collection development. It can be used as management data for budget justification, collection planning, insurance estimates, accreditation data, and targeting sections to inventory for duplicate and loss rates for preservation. Data gathered from a group of libraries such as in the Louisiana project can be used to assess regional collection strengths and weaknesses. It can be the basis of budget justifications to state funding authorities.

The results of the data analysis have proven to be even more interesting and informative than we initially thought and we plan to continue adding more libraries to the project.

Activities During the Project

1. A manual has been written which outlines the methodology used in conducting the shelflist sampling project. The manual contains two appendices which give the LC shelflist breakdown and a Dewey to LC conversion table. (Copy sent with Interim Report in May 1989)

2. Training was conducted at Loyola University, Nicholls State University, Southeastern University and the University of California Santa Barbara libraries for in-house personnel to perform the data-gathering.

3. At the Louisiana Library Association annual conference in Baton Rouge, March 15-18, 1989 the two investigators presented a program on the shelflist sampling methodology as a tool for collection evaluation. Data obtained from the three completed shelflist sampling projects at Loyola, Southern, and Southeastern universities was utilized in the presentation to the LLA Collection Development Interest Group. The meeting was very well attended and sparked interest in the project in academic libraries throughout the state. Library staff from Nicholls State University asked to be included in the project as a result of the presentation.

4. At the meeting of the ACRL Research Discussion Group in Dallas in June 1989, a presentation was made on the methodology and the results of the sampling projects from four Louisiana academic libraries.

5. A presentation was made to the staff of the library at Southern University utilizing the data resulting from the shelflist sampling project at that library.

Activities Since the End of the Grant Period

1. A presentation on the methodology and results from selected subject areas was made at the annual meeting of the International Association of Marine Science Libraries and Information Centers in Bermuda in October 1989.

2. In October, 1989, another presentation was made to the Annual Meeting of the South Central Regional Group of the Medical Library Association in Oklahoma City. As a result of the presentation the methodology will be applied to a group of Health Sciences libraries.

3. In November, 1989, Paskoff and Perrault presented a program on the project results to the Louisiana Academic Library Directors annual meeting in Lafayette, LA. After

this presentation, the administrators of several more Louisiana academic libraries asked to perform the necessary data gathering to be included in the project.

4. An LSU library science graduate student is currently conducting a more detailed sample of the Latin American collection at Tulane University showing country of origin of the items in each major LC subject area. This project is being done as a field experience for academic credit.

5. Another library science graduate student is comparing the collections of four hospital libraries in Baton Rouge as an independent study.

6. Training was conducted at the library at the University of New Orleans in February 1990. At the Louisiana Library Association conference in March 1990, staff from two academic libraries in north Louisiana were trained. These two librarians will train others in the region. The majority of the academic libraries in north Louisiana plan to participate in the second phase of the project.

Future Activities

1. Arrange to present methodology and results from CLR project at additional national meetings.

2. Write articles for library journals on various aspects and applications of the methodology and data from CLR project.

3. Conduct additional shelflist sampling projects in Louisiana and in other U.S. academic libraries.

4. A grant proposal has been submitted for an HEA Title IIB Library Research and Demonstration grant to develop a methodology to include microforms in the total collection analysis by subject and imprint.

APPENDIX A

CLR DATA ANALYSIS

This Appendix includes ten graphs which present the findings of the study. The first two graphs use raw numbers from each collection sampled. It also includes three tables, one for each of the three major European language groupings. These tables show the percentage of foreign language publications by LC class for each of the three research library collections.

Figures I and II. Size of collections.

Figure I graphs the total number of titles sampled, both monographs and serials, for each library. Figure II shows just the number of serial titles in the samples. These are the only two graphs which use actual numbers and show the collections sizes as they compare to each other. It should be remembered that the sample represents five per cent of each library collection.

Figures III and IV. Age of collections.

Figures III and IV give an age profile for all of the library collections included in the project. These two graphs divide the libraries into two groups based on size of collection. The first graph shows the distribution of the entire cataloged collections of the three ARL libraries by date of publication (age). The collection at Tulane shows the most retrospective strength in 19th century imprints. The University of California Santa Barbara library shows much greater collection strength beginning in the 1960's when the university moved to a new campus and experienced increases in enrollment and funding. Data for the 1980's is not for a full decade. While the number of imprints per decade somewhat reflects funding patterns and the number of new publications available for purchase, all three of these research libraries purchase retrospective as well as current publications.

Figure IV shows the same data for the other four libraries in the project. For these libraries a greater proportion of the collection is concentrated in the time period since 1960. Loyola is the only library which shows some retrospective depth and also a more consistent pattern of collection development. The ups and downs of state funding are reflected in the three state supported institutions as contrasted with the more even pattern of purchasing at Loyola. Even though data for the 1980's is not for a full decade, a decline in purchasing power is evident for the three state universities.

As data was obtained on a number of libraries, a pattern emerged with regard to the number of publications produced by time period. The period 1850-1900 is known to have produced an increase in publication activity, especially in the field of literature. For the liberal arts institutions and the larger universities in the project this is borne out in the profile by age of collections. It is also noticeable that the number of titles drops in every instance for the 1900-1920 time period. There is not a considerable rise until the decade of 1941-50. The effect of the post WWII boom is very apparent in the jump in acquisitions for all libraries in the 1961-1980 time period. Even though the 1981-1990 decade is not complete, with eight years of data included, it appears that the state funded institutions in Louisiana will be considerably below their 1971-80 level of acquisitions.

Figures V, VI, VII. Language as percent of collection.

The next group of graphs show language categories as a percent of collection. The first graph, Figure V, reflects the percentage of each library's collection which is English language imprints. The three ARL libraries show smaller portions of the total collection as English language. Loyola, which has a strong liberal arts curriculum, shows a lower percentage of English than the remaining three state universities which have almost totally English language collections. The percentage of each collection in English would be an interesting element to watch as data is obtained on more libraries of different sizes and research emphases. There is clearly a pattern here of a difference between smaller, regional institutions and nationally ranked research libraries. But there is also a significant difference in the percent of foreign language titles between the three ARL libraries.

Figures VI and VII show the percentage of foreign language imprints for the major language groups. Figure VI shows the three ARL libraries. The University of California, Santa Barbara shows the greatest strength in foreign language collections of the three. The renown of Tulane's Latin American collection is reflected in the percentage of the collection in Spanish/Portuguese. The overall data for Tulane by subject shows Spanish/Portuguese to be spread throughout the collection as well as having concentrations in the humanities and social sciences. Although UCSB has a strong Chicano and Latin American program, the collection is also strong in German, Slavic and, not surprisingly, Asian languages.

Figure VII shows the same language groupings as Figure VI for the other four Louisiana universities in the project. As reflected by the English language percentage chart, Loyola is the only library which shows any appreciable foreign language strength.

CLR Tables I, II, and III show a more specfic breakdown for the foreign language data. Each language shows the percentage of the total collection in each Library of Congress classification call number range. For example, in the LSU collection 7.60% of the European history section, D-DX is in the French language. In another example, looking at Spanish/Portuguese publications in the F's, for the three libraries respectively, LSU has 21,16%, Tulane has 45.47%, and UCSB 29.29% For the Germanic languages in the philosophy/religion categories, UCSB has the largest percentage with 9.08%; Tulane has 5.06% and LSU 8.05%.

Figures VIII, IX, X. Selected subject areas.

These three figures show several subject areas from the humanities, social sciences, and sciences for all seven libraries. These graphs do not compare one collection's strength to another; the percentage of the total collection made up by the subject areas is shown for each library individually.

Figure VIII includes the subject areas of music (M) and American literature (PS). Although SLU would appear to have more music than the other libraries, it is only that the number of music titles in the SLU collection make up a larger percentage of the total collection than the same subject area occupies in the other libraries. LSU shows a higher percentage of the total collection in PS, American literature, than the other two ARL libraries. This can be taken as an indication of strength in literature when it is borne in mind that LSU is collecting across a broader number of subject areas than the other two ARL libraries. Nicholls has the highest proportion of the total collection in American literature; conversely, Nicholls is probably collecting in fewer subject areas than the ARL libraries which accounts for the higher proportion of the collection being in literature. While LSU and Tulane both show relatively the same proportions of music to literature, UCSB shows an opposite balance between music and literature.

Figure IX shows the two western hemisphere classifications in history, E and F. Again, the great strength of the Tulane collection in Latin American history is reflected in the spike in the F's. Both LSU and UCSB which also have Latin American collections have relatively the

same proportions of the collection in both North and South American history. The other four libraries show greater strength in North American history which is to be expected since they do not have large Latin American programs.

Figure X shows three areas in the sciences, QK (botany), QA 76 (computer science) and S-SK (agriculture). The land grant universities in Louisiana predictably show much larger proportions of the library collection in agriculture than the other institutions. LSU and UCSB have almost identical percentages of the collection in computer science. Botany, a basic science, has the same representation in all of the collections except Loyola, which is more of a liberal arts institution.

SOUTHERN UNIVERSITY

A Report on the Southern University Library Shelflist Sampling Project

Prepared by

Beth Paskoff

LSU School of Library and Information Science

and

Anna Perrault

Louisiana State University Libraries

February, 1989

The column immediately following the "Overall" column is the percent of the total collection made up by each subject section. For example, the HA section, Statistics, is 0.31% of the total collection. English and American literature each make up slighty over 5% of the total collection.

The last four columns of Table I are divided into two columns each for monographs and serials. For each format the number of data elements is in the first column and the percent each makes up of that subject section is in the second column. For example, for A's there were 44 monographs in the sample and 14 serial titles. The monograph titles make up 75.86% of the A's and serial titles 24.14%. Likewise, in QD, Chemistry, 91.38% is monographs and 8.64% is serials. The totals at the end show that 96.26% of the entire collection is monographs and 3.74% is serials.

Table II: Total Collection by Imprint Year

Table II shows the overall distribution of imprints in the collection by year of publication and monograph/serial format. The time period in which the largest number of books in the collection was published was the decade 1961-1970 with 23.86% percent in that time frame. The beginning date of the greatest number of serial titles is in the 1951-60 decade. Because the last decade is not a full decade, the percentages although less than the previous full decade, look as if they would be the same or slightly higher.

Attached to Table II are four bar graphs(Figures 1-4), Overall age(Figure 1); monographs(Figure 2); serials(Figure 3); and Age by Type(Figure 4), all utilizing the same data as in Table II. Although not supplied with this report, the data by imprint year can be printed out by each subject section. The individual subject sections can be analyzed according to the relative importance of older imprints or current materials to particular subject areas.

Table III: Foreign Language Portion of Collection

Table III concentrates on foreign language distributions. The number of data elements gathered for each major language grouping is followed by the percentage of all foreign language imprints in the collection made up by that language group. The last column shows the percent of the total library collection the group occupies. For example, French has the highest number of imprints; it makes up 55.3% of all foreign language imprints in the collection and is 0.68% of the total library collection. All language imprints added together make up 1.15% of the total library collection.

Attached to Table III is a bar graph(Figure 5) showing the distribution of foreign language imprints by major language grouping.

Table IV: Total Foreign Imprints by Date

Table IV shows all foreign imprints by year of publication and is further divided into monographs and serials. For all foreign language imprints, 91.3% are monographs and 8.7% are serials. A bar graph(Figure 6) showing the distribution of all foreign imprints by publication year is attached to Table IV. This graph shows a similar pattern as that of total imprints by year in Figure 1 attached to Table I with the preponderance of titles in the decade 1961-70.

Table V: Foreign Language Distribution by Selected Subject Sections

Table V is a printout of the language distribution by decade and subject section. This table shows that the foreign language imprints are not found just in the literature classifications but are scattered throughout the collection. The numbers are higher for French literature, French being the most prevalent of the foreign languages in the collection.

Tables VI, VII, VIII, and IX: Multiple Copies and Duplication

Table VI gives the number of data elements for which there were more than one copy, the number of copies for those titles and the number of withdrawn copies according to subject sections. This printout shows that the areas in which the largest number of titles have multiple copies are the E, HM-HX, L, PR, and PS subject sections. These sections also show higher numbers of withdrawn titles, pointing to heavy use in those sections.
Table VII gives the duplicate data by year date in chronological order with the ratio of duplicates to individual titles. The total average title:copy ratio is 2.61 meaning that the average number of copies when multiple copies are found is between two and three copies per title of those titles having more than one copy.

Table VIII gives the location of duplicate titles not in the general collections. As can be expected, there is a large number of titles in the Black History collection which also have circulating copies in the main collection. Following Table VIII is a bar graph(Figure 7) of the duplication by locations other than the general collection with withdrawn copies reflected as well.

Overall duplication by imprint year is shown by Table IX, which is followed by two bar graphs utilizing this set of data. The first bar graph(Figure 8) shows the total number of multiple copies by imprint decade, with the highest number of multiple copies in the 1961-1970 decade. The second graph(Figure 9) shows the distribution of the number of titles having more than one copy by publication year with the highest number in the same decade as the data in Figure 8.

Table IX gives the percentage of titles in the collection having more than one copy as 20.36 percent.

Interpretation of Data results

Any data gathered for the purpose of collection evaluation should be interpreted in the light of the mission of that particular institution and its academic program emphases. University libraries which are part of research institutions are expected to have strong research collections in subjects in which the institution offers advanced degrees. In subject areas in which academic libraries are serving primarily undergraduates, collections need to be less comprehensive, but have more copies or editions of standard works in the field. Collection strengths will vary from one library to another according to the emphases of the institution in which the library is an integral part.

The data from the shelflist sampling project and this report are given to the library administration at the Southern University Library so that they may use it in evaluating the strengths and weaknesses of that collection. They can best determine to what extent the library collection is meeting the need of the students and faculty of Southern University in consideration of the program emphases of that institution.
